Workshop to share experiences and solutions to promote scientific and technological activities: Harmonious development between the applied research and the international publication at the University of Danang, Vietnam

On the morning of October 28, 2022, the University of Danang (UD) organized the Workshop "Sharing experiences and solutions to promote the Harmonious development between the applied research and the international publication » at the University of Danang, Vietnam, within the framework of the project Harmony Erasmus + Project.

The conference was held in a combination of face-to-face and online formats, creating opportunities for managers, researchers, lecturers, and experts to discuss, share experiences, and propose solutions to promote Science and technology activities in universities and research institutes. Attending the Conference were representatives of UD: staff managing science and technology

work of UD and member universities and affiliated training units; research groups, lecturers, and students/practitioners.

At the Conference, delegates heard speakers and experts present presentations with outstanding topics such as:

Discussions:

- Discussion 1: Promoting science and technology cooperation with localities; Speaker: Assoc. Prof.Dr. Vo Van Minh, Chairman of the School Council of University of Education - University of Danang;
- Discussion 2: Promoting scientific and technological cooperation with international partners; Speaker: Assoc. Prof.Dr. Vo Trung Hung, Vice Rector of University of Technology and Education - University of Danang;
- Discussion 3: Trends and tools to support international research and publishing.

The delegates actively discussed and interacted with speakers and experts, expressing their concern and sharing the need for the harmonious development between applied research and international publication, thereby clearly demonstrating the role, the mission of universities is not only to focus on academic scientific research, serving the goal of increasing international publications, but also to promote applied research, discovery and participation

in solving problems. Proposals come from the practical needs of localities and businesses.

To achieve this, it is necessary to innovate, improve policy mechanisms, develop models for domestic and international cooperation, and promote resources by strengthening the relationship between the government, schools, and businesses. It is also crucial to maximize the potential of scientific staff and lecturers at universities and research institutes. Effective science, technology, and innovation initiatives depend on research with strong research groups at its center./.
